The Versa Vial™ is a 12x32mm shell vial with a modified neck that allows pick-up by an autosampler. This vial can be used in most autosamplers that currently use 12x32mm vials. The vase-like design of the Versa Vial™ system has the largest opening available for any autosampler. The elongated pick-up area, in the neck, accommodates variations in the robotic arm settings for reliable sample pick-up. The wide ID, 9mm opening, allows samples to be added using a pipet tip. Choose from clear or amber Type I borosilicate glass. Marking spots are available.
