

# Ultraseal® CAP PRO

Electrically Operated Mat Capper

- Automatically adjusts to different microplate heights
- Ensures stronger and more complete seal
- Variable force selection
- Automatically ejects plate when seal complete
- Simple slide operation

The Ultraseal CAP PRO designed to cap and seal different types of microplates with pre-laid capped sheets and rubber gasket seals. Our product uses three different pre-set pressures, which include low sealing force of 100kg, medium sealing force of 200kg and a high sealing force of 300kg. These forces can be used to push down equally and apply these caps to various different tubes and plates used within a simple run. In turn saving time and making the capping process easier for anyone to complete. Removing the need for tedious manual labor.
